

SINGLE USE MEDICAL DEVICES

RELIABILITY. EVERY SINGLE USE.

It all started with one clinical laboratory test device then evolved into production of millions of single-use devices each year.

A clinical medical device customer contacted us to make the electronics for a piece of laboratory equipment. The relationship grew to include the manufacturing of the entire finished assembly. Our success led to Kimball providing the solution for the manufacturing of the finished assembly, the electronics within, the single-use testing materials and finished packing for the products.

We expanded our capabilities even further to produce single-use surgical devices and tools. Our areas of expertise include scientific injection molding, cleanroom assembly, sterilization, and surgical packaging.

Kimball Solutions continues to tailor our capabilities to meet the requirements and challenges of the medical market.
