SE	030	M	1	Transaction Set Trailer

* N1 'ST' and 'SF' must be included. N101, N102, N103, and N104 must contain the values transmitted in the corresponding N1 'ST' and 'SF' segments in the associated 850 transaction. N102 may not be transmitted in the 850. The returned N1 segments must occur at the same header or detail level as transmitted in the 850.

** PER 'BD' and 'SA' must be included in their entirety as transmitted in the associated 850 and at the same header or detail level.

The preceding table lists the suggested segment usage for the purchase order acknowledgment transaction. Refer to the 'Kimball Usage' column to determine usage requirement. Element usage within each segment is at the sender's discretion, following the X12 standard specification.

Please refer to the document "Kimball Electronics EDI Communication Info" for VAN and interchange id information.
