

# Alexandru Carpus

Automation Engineer  
Kimball Electronics Romania

▣ Started at Kimball Electronics in 2015

- Alexandru currently lives in Varias, Romania. This is where he spends his free time with his two children.
- Alexandru wanted a start in a new company from the beginning, and being just over “the street” employed, He saw Kimball being built and thought that this would be a nice chance to be one of the first employees.
- Alexandru developed software for maintenance management since 2015 when he joined Kimball as a personal hobby but took off nicely and people started to use it. He wrote the code in VBA and interface in Access Database, but after several years he re-wrote the entire software in vb.net and using SQL Server as database. Since 2020 the software is still running, is used in daily basis by almost 20 users every day, if not more. That is the project he is most proud of.
