Guideline Summary

Kimball Electronics (KE) expects suppliers to ship materials according to these standards unless otherwise directed on purchase order or other written communication.

**Mode and Service**

Freight must be moved in the most economical mode and service level available according to the terms & conditions and instructions set forth within this guide and on the purchase order. Agreement to make exception to this policy must be documented with a premium freight authorization form as outlined within this routing guide.

Suppliers who arrange more expensive transportation do so at the risk of them being responsible for paying the full price for this transportation. Suppliers who do not arrange carriers on time to allow for economy pricing, will be held accountable for complete express shipping costs.

**Small Parcel**

Parcel shipments should be arranged for shipments less than 70 kg. (150 lbs.) Kimball authorizes shipments using Fed Ex and UPS carriers at most locations and DHL in Europe. Shipper must provide correct Kimball account number for proper billing.

**Trucking LTL & TL**

Shipments of 70 kg. (150 lbs.) or greater should ship according to specifics outlined in each KE location’s instructions on the following pages.

**Imports**

Follow specific directions for each Kimball location.

**Consolidation**

Suppliers are expected to consolidate parcel shipments daily to the same KE location. Suppliers are expected to consolidate LTL and TL shipments made to the same KE facility in the same week into a single shipment.

**Documentation**

KE Purchase Order number must appear on freight bill, BOL shipper reference block, and in the second reference field on all small package shipments. Provide only the Kimball Purchase Order number with no added formatting.

KE requires the material purchase order number to tie the shipment back to the original order. This is essential for proper receiving of the material and payment of material and freight invoices.

**Shipment Label**

Appendix 1: Instructions

Shipping Expectations

100 Delivery

110 Mistakes are costly to all supply chain partners. Mistakes include but are not limited to:

- Shipment made to wrong Kimball Electronics facility
- Shipping overage
- Packing List incorrect, missing from the shipment or different than Purchase Order

120 Delivery date.

KE expects material to arrive at named destination no more than 3 days early and zero days late. As KE increases the use of consolidated shipments delivery timing becomes even more critical. Kimball expects Suppliers to pay for expedited freight when a supplier is unable to meet agreed upon ship dates.

130 Use of approved carrier.

Suppliers are expected to follow Kimball Electronics Global Routing Guidelines unless specifically directed to by Kimball’s buyer on the Purchase Order or Premium Freight Authorization documents.

140 Same-day shipments consolidated into single shipment.

KE expects suppliers to consolidate shipments into a single freight invoice for each day for each trailer / container load of material shipped to a single KE facility. For international ocean shipments, the consolidation should occur for the entire week’s shipment based upon origin port shipping schedules. Consolidating freight reduces per-invoice and per-weight charges.

150 Follow Incoterm specified on Purchase Order.

Approved Incoterms include: Ex-works, FCA, and DDP. All other terms require approval from Kimball Global Logistics Manager. Kimball’s policy is to ship freight collect whenever it is beneficial to do so. Kimball performs an ongoing freight evaluation to insure all freight movements are occurring at optimal cost and service levels.

160 Carton / Material not damaged.

Suppliers must ensure containers are capable of shipping individually or in pallet configurations as needed. Suppliers are expected to repack into suitable packaging as required by the shipping method. See Appendix 3 for more details.
200 Freight Administration

210 KE Purchase Order number must appear on freight bill, BOL shipper reference block, and in the second reference field on all small package shipments. This must be the Kimball Purchase Order number only, with no added characters or numbers.

KE requires the material purchase order number to tie the shipment back to the original order. This is essential for proper receiving of the material and payment of material and freight invoices.

220 Insurance

Generally, KE insures freight against loss and damage. Freight not appropriately packaged will be dealt with according to section 160 above. KE will not pay for additional insurance policies unless such is specifically requested on the original purchase order.

230 Shortage vs. Purchase Order / Packing List

Shortages cause additional shipping, handling and receiving costs along with adding risk to production schedules. KE requires suppliers to meet purchase order quantities when the supplier accepts the purchase order.

240 A packing list must accompany each shipment.
Appendix 1: Instructions (continued)

300 Markings

310 Pallet Labeling
Mislabeling pallets can cause delays in customs, LTL hubs, and receiving. Suppliers are expected to provide accurate pallet placard information.

320 Case Labeling
Mislabeling cases can cause delays in customs, small package sorting and KE receiving. Suppliers are expected to provide accurate case marking and routing information as appropriate for selected shipping method and according to KE’s labeling standards. [KEG Shipment Labeling Standard]

330 Pallet Configuration or Weight
Shipping pallet configurations as determined by supplier and KE package engineers must be adhered for over-the-road, ocean and air shipments. Failure to comply can result in damage and usually results in additional receiving and restacking costs.

340 Case Dunnage
Individual cases are typically designed to protect the material in transit, in storage, and during handling. Cases displaying chronic shipping failures will require correction.

350 Case / Pallet Weight
Case and pallet weights not matching their documentation within a reasonable tolerance can create delays in handling and generate excessive freight costs. Suppliers are expected to accurately define pallet and case measurements and weights on all documentation.

KE will provide sufficient warning and work with suppliers not able to meet these shipping success factors. Chronic failure to meet minimum shipping success factors will lead to fines between $10 and $150 for each occurrence.

https://ispm15.com/

International Safe Transit Association
https://ista.org/
Appendix 3:

Kimball Electronics Shipping Preparation Requirements

1. Total pallet weight cannot exceed 900 kg (2000 lbs.) As the length of the product increases the total acceptable pallet weight decreases relative to product length.

2. KE expects suppliers to follow pallets and packaging materials guidelines set forth by each governing region.

3. Total pallet height restricted to a maximum of 250 centimeters, (100 inches) including pallet for ground delivery. Pallet height is restricted to a maximum of 215 centimeters (85 inches) including pallet for air and ocean delivery.

4. Pallet dimensions should be consistent with the standards set forth by the receiving region. Pallets can be made of wood, plastic or steel and must comply with IPPC standards. Unless other arrangements have been approved by Kimball pallets should follow these standards:
   • Shipments to the U. S. should be made on four-way 40 in. X 48 in. pallets.
   • Shipments to Europe should be made on: Euro: 120 cm x 80 cm. or ISO: 120 cm x 100 cm. pallets.
   • Shipments to China should be made on 120 cm x 110 cm pallets.
   • Shipments to Thailand should be made on 100 cm x 110 cm pallets.

5. Any custom size pallets must be pre-approved by Kimball Electronics Logistics.

6. When loading trailers be sure to down-stack product to level the load across the trailer while still loading by PO, then by SKU. We have had problems with front-loaded product spilling to the rear of the trailer because it was not secured properly. If pallets are leveled across the trailer this issue should be minimized.

7. Pallet must arrive in good condition, banded or stretch-wrapped to keep the product secure on the pallet, and undamaged.

8. Packaging must be sufficient to protect the material while in transit to a Kimball facility allowing material to remain intact and properly contained under typical shipping conditions.

9. Suppliers are responsible for ensuring packaging is compliant with an internationally recognized standard such as International Safe Transit Association (ISTA). Certification is recommended.

10. Suppliers agree to support claim requirements within small package service providers’ guidelines.
Appendix 4: Security Recognition

Kimball Electronics has partnered with Customs and Border Protection to develop a more secure border environment by focusing on the physical security of the production, transportation, and importation elements of the supply chain process through the **Customs-Trade Partnership Against Terrorism (C-TPAT)**. Kimball Electronics is required to develop and implement, within a verifiable, documented program, enhanced security procedures throughout its supply chain process. Where Kimball Electronics does not exercise control of a production facility, transportation or distribution entity, or process in the supply chain, Kimball Electronics is required to communicate certain security recommendations/guidelines to its suppliers and, where practical, condition its relationships with those entities on the acceptance and implementation of the same. KEG expects all suppliers to voluntarily participate in the U.S. C-TPAT program.

Manufacturers are asked to develop and implement a sound plan to enhance security procedures. These are general recommendations that should be followed on a case by case basis depending on the company’s size and structure and may not be applicable to all. The company should have a written security procedure plan in place that addresses the following:

**Physical Security:** All buildings should be constructed of materials, which resist unlawful entry and protect against outside intrusion. Physical security should include:
- Adequate locking devices for external and internal doors, windows, gates, and fences.
- Segregation and marking of international, domestic, high-value, and dangerous goods cargo within the warehouse by a safe, caged, or otherwise fenced-in area.
- Adequate lighting provided inside and outside the facility to include parking areas.
- Separate parking area for private vehicles separate from the shipping, loading dock, and cargo areas.
- Internal/external communications systems in place to contact internal security personnel or local law enforcement police.

**Access Controls:** Unauthorized access to the shipping, loading dock and cargo areas should be prohibited. Controls should include:
- The positive identification of all employees, visitors and suppliers.
- Procedures for challenging unauthorized/unidentified persons.

**Procedural Security:** Measures for the handling of incoming and outgoing goods should include the protection against the introduction, exchange, or loss of any legal or illegal material. Security controls should include:
- A designated security officer to supervise the introduction/removal of cargo.
- Properly marked, weighed, counted, and documented products.
- Procedures for verifying seals on containers, trailers, and railcars.
- Procedures for detecting and reporting shortages and overages.
- Procedures for tracking the timely movement of incoming and outgoing goods.
- Proper storage of empty and full containers to prevent unauthorized access.
- Procedures to notify Customs and other law enforcement agencies in cases where anomalies or illegal activities are detected or suspected by the company.

**Personnel Security:** Companies should conduct employment screening and interviewing of prospective employees to include periodic background checks and application verifications. Education and Training Awareness: A security awareness program should be provided to employees including recognizing internal conspiracies, maintaining product integrity, and determining and addressing unauthorized access. These programs should encourage active employee participation in security controls.
Appendix 5:

Supplier Acknowledgment of Routing Guide & Security Guidelines

The undersigned, as an authorized representative of said company, acknowledge receipt and understanding of the expectations outlined in the Kimball Electronics Global Routing Guide version 1.0.
